

### Deliverable 3.4 Data Access Agreement Templates – publishable summary

In order to offer more flexibility to data providers, PIONEER has chosen to utilise a mixture of both Federated (remote data) and Central (importable data) Database Models. PIONEER will ask data providers to choose which model they prefer to use, or are required to use, by local law or other restrictions/regulations.

WP3 together with WP8 have established two standardised Data Access Agreement (DAA) templates (Central and Federated) to be used with data contributors. Once data contributors have agreed to share and provide access to their data, we will negotiate a DAA with each participant. Both the Central and Federated DAA outline the policies and procedures under which their data may be accessed and analysed. The DAAs outline:

1. Who may access their data.
2. What kinds of questions may be addressed.
3. What role the site would play in the analysis.
4. What role they would have in future publications based on their data.
5. What legal issues are to be taken into consideration in each country.

The DAA templates are a starting point for individual negotiations with potential data contributors for access to their data.
